

To maintain compliance with [ACCME Essential Area 2](#), all activities must be developed in the context of desirable Physician attributes as those designated by the Institution of Medicine (IOM) and American Board of Medical Specialties (ABMS)/Accreditation Council of Continuing Graduate Medical Education (ACGME) Competencies.

ABMS/ACGME

- —Provide care that is compassionate, appropriate and effective treatment for health problems and to promote health.
- —Demonstrate knowledge about established and evolving biomedical, clinical and cognate sciences and their application in patient care.
- —Demonstrate skills that result in effective information exchange and teaming with patients, their families and professional associates (e.g. fostering a therapeutic relationship that is ethically sound, uses effective listening skills with non-verbal and verbal communication; working as both a team member and at times as a leader).
- —Demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles and sensitivity to diverse patient populations.
- —Demonstrate awareness of and responsibility to larger context and systems of healthcare. Be able to call on system resources to provide optimal care (e.g. coordinating care across sites or serving as the primary case manager when care involves multiple specialties, professions or sites).
- —Able to investigate and evaluate their patient care practices, appraise and assimilate scientific evidence and improve their practice of medicine.

IOM

- Identify, respect, and care about patients' differences, values, preferences, and expressed needs; listen to, clearly inform, communicate with, and educate patients; share decision making and management; and continuously advocate disease prevention, wellness, and promotion of healthy lifestyles, including a focus on population health.
- Cooperate, collaborate, communicate, and integrate care in teams to ensure that care is continuous and reliable.
- Integrate best research with clinical expertise and patient values for optimum care, and participate in learning and research activities to the extent feasible.
- Identify errors and hazards in care; understand and implement basic safety design principles, such as standardization and simplification; continually understand and measure quality of care in terms of structure, process, and outcomes in relation to patient and community needs; and design and test interventions to change
